

# Release Notes - September - 1 2016

- Improvements
  - Core Classes Independent from Project Code
  - Correct Command Names for Console Commands in New Relic
  - Discount Comparator
- Bugfixes
  - Login to Zed After Timeout
  - Order by First Column in Zed Tables
  - Persist Redis Key Cache
  - Wrong Sales Matrix Links
  - Zed Tables Layout

## Improvements

Core Classes Independent from Project Code

`AbstractFactory` of the Kernel bundle had a reference to Application, which was making core potentially project core dependent. We fixed this behaviour. Introducing project level changes should for no reason break core functionality.

## Affected Bundles

Major	Minor	Patch
n/a	- <a href="#">Application 2.5.0</a> - <a href="#">Kernel 2.5.0</a>	n/a

Correct Command Names for Console Commands in New Relic

In New Relic all CLI calls were shown as "vendor/console". Now full command names are added, also these are marked as background jobs.

## Affected Bundles

Major	Minor	Patch
n/a	- <a href="#">Console 2.0.2</a>	n/a

#### Discount Comparator

0 or '0' were not allowed before for the Discount QueryString Comparators. This improvement allowed the numeric values to go through the comparison.

Major	Minor	Patch
n/a	n/a	- <a href="#">Discount 3.1.2</a>

#### Bugfixes

#### Login to Zed After Timeout

When being logged out of Zed due to timeout the redirect to login was lost and next log in was redirecting to homepage. The referrer is now passed to the login page and used to redirect to last page before being logged out.

Major	Minor	Patch
n/a	n/a	- <a href="#">Auth 2.0.9</a>

#### Order by First Column in Zed Tables

Ordering by explicitly the first column in Zed tables was not working in case if the first column was not the ID of the record. This bug is fixed now.

#### Affected Bundles

Major	Minor	Patch
n/a	n/a	- <a href="#">Refund 3.0.1</a> - <a href="#">Sales 2.2.6</a>

## Persist Redis Key Cache

The `get` calls to Redis should have been combined to one `mget`. For this reason we have a key-cache, but the `persistCache()` method was not being called. Now we have a service provider (`\Spryker\Yves\Storage\Plugin\Provider\StorageRequestCacheServiceProvider`), that will persist all the used cache keys to Redis per request after it's registered in the application bootstrap.

### Affected Bundles

Major	Minor	Patch
n/a	- <a href="#">Storage 2.2.0</a>	n/a

## Wrong Sales Matrix Links

The sales matrix in Zed / Sales / Matrix shows three links in each cell: "<1d", "1d-7d" and ">7d". "<1d" means below 1 day, "1d-7d" means more than one day but less than one week and ">7d" means more than 7 days. For the middle number the lower boundary was missing. For this reason the matrix showed incorrect content. Lower boundary is added to fix this issue.

### Affected Bundles

Major	Minor	Patch
n/a	n/a	- <a href="#">Sales 2.2.7</a>

## Zed Tables Layout

When in Zed data tables the content was overflowing, the layout was hiding the content. This is fixed now to have an automatic scroll for this scenario.

### Affected Bundles

Major	Minor	Patch
n/a	n/a	- <a href="#">GUI 2.1.10</a>
